GENERATIVE ENGINE OPTIMIZATION

How AI engines read *your brand.*

A six-dimension GEO audit of View official Fursa real hero's Catalog on WhatsApp, measuring how ChatGPT, Claude, Perplexity, Gemini, and Google AI Overviews read, trust, and cite https://wa.me/c/255767438975.

GEO SCORE

Critical

1 pages analyzed · 8 findings · E-commerce

WEBSITE	ANALYSIS DATE	PREPARED BY
wa.me/c/255767438975	November 7, 2026	Silverback Marketing

01 · GEO AUDIT

Executive *summary*

View official Fursa real hero's Catalog on WhatsApp scores 14/100 for GEO readiness, which places the site in the CRITICAL tier. The audit analyzed 1 representative pages and found the biggest opportunities in crawler access, structured data, and quote-friendly content. The fastest path to improvement is to remove access blockers, publish stronger machine-readable entity signals, and turn key commercial pages into clear answer destinations.

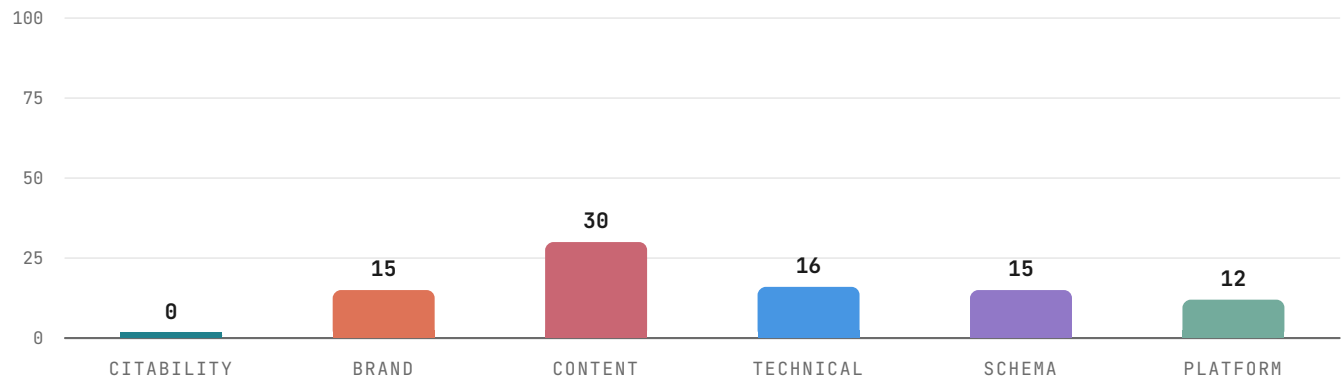
What is already working

- Most major AI crawlers can currently access the site, which removes one of the most common GEO blockers.

02 · GEO AUDIT

Score *breakdown*

Dimension	Score	Weight	Weighted
AI Citability & Visibility	0/100	25%	0
Brand Authority Signals	15/100	20%	3
Content Quality & E-E-A-T	30/100	20%	6
Technical Foundations	16/100	15%	2.4
Structured Data	15/100	10%	1.5
Platform Optimization	12/100	10%	1.2
OVERALL GEO SCORE	**14/100**	**100%**	**14**



03 · GEO AUDIT

AI platform *readiness*

These scores reflect how likely your content is to be cited by each AI answer surface. A score below 50 indicates significant barriers to citation on that platform.

ChatGPT		12 /100
Perplexity		11 /100
Google AI Overviews		12 /100
Gemini		12 /100
Bing Copilot		12 /100

04 · GEO AUDIT

AI readiness *kit*

1 of 15 AI readiness files are deployed. The complete kit gives AI systems a direct machine-readable map of the site and earns a +20 point GEO score bonus. Reference deployment: ai.silverbackmarketing.com.

05 · GEO AUDIT

AI crawler *access*

Blocking AI crawlers prevents AI platforms from citing your content. The table below shows which AI crawlers can currently reach the site.

Crawler	Platform	Status	Recommendation
GPTBot	ChatGPT	ALLOWED (200)	Keep access open
ClaudeBot	Claude	ALLOWED (200)	Keep access open
PerplexityBot	Perplexity	ALLOWED (200)	Keep access open
GoogleBot	Google AI Overviews	ALLOWED (200)	Keep access open
BingBot	Bing Copilot	ALLOWED (200)	Keep access open

06 · GEO AUDIT

Key *findings*

CRITICAL

Homepage carries a noindex directive

The homepage asks search engines and AI crawlers not to index it (via meta robots or the X-Robots-Tag header), which removes the site from consideration for citations entirely.

PAGES · https://wa.me/c/255767438975

CRITICAL

No structured data was detected

The sampled pages do not expose any JSON-LD or equivalent schema types, leaving AI systems without a reliable machine-readable identity for the brand or content.

HIGH

Content is not yet quote-friendly for AI systems

The sampled pages skew toward low citability, which usually means the copy is too vague, too thin, or too contextual for an answer engine to safely extract.

PAGES · https://wa.me/c/255767438975

HIGH

llms.txt is missing

The site does not currently publish an llms.txt file. While this is still emerging, it is one of the clearest ways to guide AI systems toward your most important pages.

MEDIUM

AI readiness kit is not deployed

Only 1 of 15 AI readiness files were found at the web root. A complete kit (llms.txt, ai.txt, ai-entities.json, rag-index.json, and companions) gives AI systems a full machine-readable map of the site.

MEDIUM

Authority and trust signals are weak

The site does not yet show a strong enough mix of authoritativeness, company context, and proof elements across the pages sampled.

MEDIUM

Missing the schema types expected for a E-commerce site

The site was classified as E-commerce, but none of the schema types AI systems expect for this category (Product, Offer, AggregateRating) were found on the sampled pages.

MEDIUM

Off-site entity presence is thin

The brand appears to have limited discoverable entity reinforcement outside the website itself, especially on sources AI systems commonly cross-check.

07 · GEO AUDIT

Prioritized *action plan*

Quick wins

THIS WEEK. HIGH IMPACT, LOW EFFORT.

01 Remove the noindex directive from the homepage meta robots tag or X-Robots-Tag response header.. Without indexation nothing else in this report matters. This single fix unblocks all AI visibility.

02 Add Organization or LocalBusiness schema to the homepage, then layer in page-level schema such as FAQPage, Article, Product, or SoftwareApplication.. Improves entity understanding across ChatGPT, Google AI Overviews, Gemini, and Bing Copilot.

03 Rewrite priority pages using clear answer blocks, factual statements, and self-contained paragraphs in the 100-200 word range.. Raises the odds that AI tools will quote your pages directly instead of paraphrasing competitors.

04 Publish /llms.txt with your key URLs, short descriptions, and the most important sections of the site.. Creates a direct guidance layer for AI crawlers and improves audit completeness.

Medium-term improvements

THIS MONTH. CONTENT OR TECHNICAL CHANGES.

01 Deploy the complete AI readiness file set to the web root. See https://ai.silverbackmarketing.com/ for a reference deployment.. A complete kit adds a +20 point bonus to the GEO score and gives every major AI platform a direct reading path into the site.

02 Strengthen About, Team, Contact, and proof sections with credentials, client evidence, years in business, and external references.. Builds trust signals that both users and AI systems rely on when choosing what to cite.

03 Add Product markup to the most relevant pages, then extend to the remaining types where content supports them.. Category-matched schema helps AI platforms classify the business and select it for category-specific answers.

04 Prioritize LinkedIn, YouTube, review platforms, and a clean sameAs graph; pursue Wikidata or Wikipedia when the brand is notable enough.. Makes the brand easier for AI systems to recognize, disambiguate, and trust.

Strategic initiatives

THIS QUARTER. LONG-TERM COMPETITIVE ADVANTAGE.

01 Deploy the complete AI readiness file set to the web root. See https://ai.silverbackmarketing.com/ for a reference deployment.. A complete kit adds a +20 point bonus to the GEO score and gives every major AI platform a direct reading path into the site.

02 Strengthen About, Team, Contact, and proof sections with credentials, client evidence, years in business, and external references.. Builds trust signals that both users and AI systems rely on when choosing what to cite.

03 Add Product markup to the most relevant pages, then extend to the remaining types where content supports them.. Category-matched schema helps AI platforms classify the business and select it for category-specific answers.

04 Prioritize LinkedIn, YouTube, review platforms, and a clean sameAs graph; pursue Wikidata or Wikipedia when the brand is notable enough.. Makes the brand easier for AI systems to recognize, disambiguate, and trust.

08 · GEO AUDIT

Methodology & *glossary*

This GEO audit was conducted on November 7, 2026, analyzing 1 pages of https://wa.me/c/255767438975. The analysis scored six weighted dimensions: AI Citability & Visibility (25%), Brand Authority Signals (20%), Content Quality & E-E-A-T (20%), Technical Foundations (15%), Structured Data (10%), and Platform Optimization (10%).

Platforms assessed: Google AI Overviews, ChatGPT Web Search, Perplexity AI, Google Gemini, Bing Copilot. Standards referenced: Google Search Quality Rater Guidelines, Schema.org specification, Core Web Vitals (2026 thresholds), the llms.txt emerging standard, and the Silverback AI Readiness Kit file set.

Term	Definition
GEO	Generative Engine Optimization, the practice of optimizing content for AI search citation
AIO	AI Overviews, Google's AI-generated answer boxes in search results
E-E-A-T	Experience, Expertise, Authoritativeness, Trustworthiness
SSR	Server-Side Rendering, generating HTML on the server so crawlers get full content
TTFB	Time to First Byte, the server response speed measured during the crawl
JSON-LD	JavaScript Object Notation for Linked Data, the preferred structured data format
llms.txt	Proposed standard file for guiding AI systems about site content

Term	Definition
`AI Readiness Kit`	Silverback's 15-file machine-readable web-root deployment for AI systems

This report was generated by the Silverback Marketing GEO audit engine. Scores and recommendations are based on automated analysis and industry benchmarks; validate with platform-specific testing before major investments.
